Sequence 3, Application US/09519223

Patent No. 6274140

GENERAL INFORMATION:
APPLICANT: Jones, Simon
APPLICANT: Tang, Jim
TITLE OF INVENTION: Calcium Independent Phospholipase A2/B
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genetics Institute, Inc.
                           COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYGTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25 (EPO)
CUBRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/55,568B
FILLING DATE:
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAMME: BEOWN, Scott A.
REGISTRATION INFORMATION:
TELEPHONEY(10) 876-5851
FILEPHONEY(10) 1876-5851
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CITY: Cambridge

The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAY92945-Y93131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hepatotropic, antagonist, transforming growth factor betal, TGF-bl; competitive inhibition, collagen synthesis stimulation inhibitor, liver; extracellular matrix degradation inhibitor; mimetope, cirrhosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ezquerro Saenz IJ, Lasarte Sagastibelza JJ, Prieto Valtuena J;

This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antigenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 encoding the peptides are used for treatment of liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-b1) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-b1 and/or its receptors. Peptides AXY92945-Y93133 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-b1 to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or
                                                                                                                                                                                                                                                                                                                                                         Hepatotropic, antagonist, transforming growth factor betal, TGF-bl; competitive inhibition; collagen synthesis stimulation inhibitor, liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                  Gaps

                                                                                                                                                                                                                  reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antigenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the

```
The invention relates to an isolated antibody or binding fragment of antibody, which binds with a protein that is encoded by an isolated nucleic acid molecule the complementary sequence of which hybridises undeled acid molecule the comprising the undeled acid molecule comprising the nucleotides 54-593 of the human cancer marker NY-ESO-1 cDNA appearing as uncleotides 54-593 of the human cancer marker NY-ESO-1 cDNA appearing the nucleotides 54-593 of the human cancer marker NY-ESO-1 cDNA appearing the monoclonal antibody, sereening for cancer in a sample (by contacting the sample with the isolated antibody, and determining binding of the novel antibody to a target as an indicator of cancer), determining antibodies antibody to a target. as an indicator of cancerous condition (by monitoring a cancerosisted artigen in a sample, determining antibodies cancerous condition by a supject or a peptide derived from NY-ESO-1 protein, with the amount of the parameter is cantibody that binds to it, where the amount of the parameter is and treating a subject afflicted with a cancerous condition by administering to the subject an antibody that specifically binds to NY-ESO-1 protein or to an ESO-1 derived peptide (e.g. a peptide identified as stimulating a CTL (cytolytic T cell line) identified by SEREX (serological identification of antigens by recombinant expression cloning) expressed on a cancerous condition) where the antibody is coupled to an anticancer agent. The antibody is useful for treating cancer, e.g. melanoma, belader cancer, conditions or breast, prostate, lung, ovarian, thyroid or bladder cancer, infections or autoimmune disorders. The present sequence represents an expense.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antiganic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present
                                                                                                                                                                                                                            New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.

This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antidenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The specification describes a gene recombinant antibody that can specifically react with the extracellular domain of human CCR4. The antibody and its fragment are applicable in diagnosis and development of drugs for Th2-mediated immune diseases and blood cancer including bronchial asthma, atrophic dermatitis and leukemia. The present sequence represents a complementarity determining region (CDR) of the light chain variable region of an antibody directed against human CCR4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gene-recombinant antibody, its fragment and encoded DNAs, applicable in diagnosis and development of drugs for Th2-mediated immune diseases and blood cancer, and in reducing or eliminating cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Complementarity determining region 3 of light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nakamura K;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel human CDR-grafted antibody, or its fragment. The antibody or fragment reacts specifically with the extracellular region of human CC Chemokine receptor 4 (CCR4) but shows no reactivity toward human platelets. The antibody of the invention has cytostatic, antiallergic, antiinflammatory and immunomodulator activity. The antibodies and their fragments are applicable in the diagnosis and treatment of e.g. cancer and immune diseases. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antiinflammatory; diagnosis; interstitial pneumonia; anti-CCR4 antibody;

prevention of interstitial pheumonia containing anti-CCR4 antibody and/or anti-CCR3 antibody. The reagents are used for the diagnosis, prevention and treatment of interstitial pneumonia. The invention provides a method for distinguishing atypical from typical idiopathic interstitial pneumonia, since the former involves infiltration of mainly Th1 cells malority of the latter involves infiltration of both Th1 and Th2 cells with a majority of the latter. This sequence represents the complementarity determining region 3 (CDR3) from the mouse anti-CCR4 antibody light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to diagnostic reagents and agents for treatment and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Agents containing anti-CCR4 and/or anti-CXCR3 antibody for diagnosis, prevention and treatment of interstitial pneumonia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            pathogenic virus, alternative reading frame; antigenic determinant; virucide; vaccine; therapeutic agent; infection; HPV.
anti-CXCR3 antibody, Th1 cell infiltration, Th2 cell infiltration, complementarity determining region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid aequence selected from 51 defined amino acid sequences (ABL25347 to ABP25397). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of
                                                                                                                                                                                                                                                                                           This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antiganic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the

particularly when compared to the use of whole antigens in vaccine antigens. There is evidence that the immune response to whole antigens is directed largely toward variable response to whole antigens is directed largely toward variable response to whole antigen, and myour-based vaccine may be selected from conserved regions of viral or tumour-associated antigens, which therefore reduces the likelihood of escape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to composition of the groups, carla and HTL), and further, to modify the composition of the groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches. ABP11501 to ABP25412 represent peptide sequences used in the exemplification of the present invention. (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid sequence selected from 51 defined amino acid sequences (ABL25347 to ABP25397). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of group-based vaccines has several advantages over traditional vaccines, particularly when compared to the use of whole antigens in vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HIV; HIV-1; human immunodeficiency virus; env; pol; gag; nef; vpr; vpu; vif; tat; cytotoxic T lymphocyte, CTL; immune response; epitope; antigen; vaccine; HIV infection; immunisation; virucide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vaccine compositions comprising human immunodeficiency virus-1 (HIV-1) peptide groups, useful for vaccinating against HIV-1.
group-based vaccines has several advantages over traditional vaccines

                                            an group-based vaccine may be selected from conserved regions of viral or tumour-associated antigens, which therefore reduces the likelihood of escape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of groups that may be present additional advantage of an group-based vaccine approach is the ability to combine selected groups (CTL and HTL), and further, to modify the composition of the groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches. Applisol to ABP25412 represent peptide sequences used in the exemplification of the present invention. (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated or purified nucleic acid associated with multiple sclerosis and/or rheumatoid arthritis, useful for detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tuke PW;
compositions. There is evidence that the immune response to whole antigens is directed largely toward variable regions of the antigen, allowing for immune escape due to mutations. The groups for inclusion in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated or purified nucleic acid from a virus associated with multiple sclerosis and/or rheumatoid arthritis,

milituriar bilitations of the managements of the main included are a process for artificial or defined peptides (including immunodominant peptides). Droteins or defined peptides (including immunodominant peptides, antigenic peptides or conserved motifs). Also included are a process for detecting a virus associated with multiple sclerosis or rheumatoid arthritis, a prime associated with multiple sclerosis or rheumatoid arthritis, a prime associated with multiple sclerosis or rheumatoid a arthritis, a prime for the amplification by polymerisation of a nucleic acid of a viral material associated with multiple sclerosis or rheumatoid a arthritis, a polypeptide exhibiting an inhibitory activity on the proteclytic, reverse transcriptase or ribonuclease H activity from MSRV, and an antibody directed against the MSRV-1 virus obtained by and an entibody directed against the MSRV-1 virus obtained by immunogenic agent consisting of the antigenic polypeptide defined above. The nucleic acids are useful for detecting a biological sample, the presence of or exposure to a virus associated with multiple sclerosis or rheumatoid arthritis. The present sequence is an MSRV immunogenic or antigenic peptide (or a conserved peptide motif). Note: The SEQ ID numbers in the sequence listing. Consequence the sequences mentioned in the claims
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid which comprises the pol
gene of a retrovirus associated with multiple sclerosis or rheumatoid

Patent No. 5648458
GENERAL INFORMATION:
APPLICANT: Cavirla, Steven E.
APPLICANT: Dower, William J.
APPLICANT: Dower, William J.
TITLE OF INVENTION: Peptides and Compounds That Bind to NUMBED OF ENVIRONMENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB 1; Length 12; 72;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COUNTRY: USA
ZIP: 22313
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM CC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/241,054

AAY93096; RESULT 1

Disclosure; Page 31; 86pp; Spanish.

The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAY92945-Y93131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGP) factor betal (TGP-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGP-bl and/or its receptors. Peptides AAY92945-Y93131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hepatotropic, antagonist, transforming growth factor betal, TGF-bl; competitive inhibition; collagen synthesis stimulation inhibitor; liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAY92945-Y9131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolypic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or betall of the collagen synthesis) encoding the peptides are used for treatment of liver
                                                                                     Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hepatotropic, antagonist, transforming growth factor betal, TGF-bl; competitive inhibition; collagen synthesis stimulation inhibitor; liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Prieto Valtuena

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAV92945-Y9313 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver

                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-1) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-b1 and/or its receptors. Peptides ANY92945-Y93131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-b1 to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis
           examples of the peptides of the invention. These are similar to the human chemokine receptors CCRS, CXCR4 and STR13, as well as CD4. These are useful in the treatment of HIV, as they prevent replication of the virus. The present sequence is an example of a peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human chemokine receptor; CD4; HIV; glycoprotein 120; gpl20; antagonist; replication; CCR5; CXCR4; CD4; STRL33.

                                                                                                            ò
                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                    bind to HIV glycoprotein 120 (gp120). These are similar to the human chemokine receptors CCR5, CXCR4 and STRL33, as well as CD4. These are useful in the treatment of HIV, as they prevent replication of the virus. The present sequence is an example of a peptide of the invention
